NORTH DAKOTA

STATE PLANNING REGIONS

HIGH TECH--OCCUPATIONS FOR THE '80s?

With all the recent publicity about high technology, many North Dakotans would be led to believe that the majority of the state's future job openings will be in the new, fast-paced world of "high tech." Unfortunately, this does not appear to be the case. Data in the Revised Employment Projections to 1990, [1/] indicates that those high tech occupations will constitute only a small portion of the available jobs in North Dakota during the late 1980s.

A number of high tech occupations are expected to show phenomenal percentages of growth. Computer-related jobs, for example, including systems analysts, computer programmers, computer and peripheral equipment operators, and computer service technicians, are expected to grow anywhere from three to six times faster than the average. Most engineering and engineering technician occupations should also show large percentage increases.

However, the number of job openings in these and other high tech occupations are quite small in comparison with many of the clerical and service-related occupations. The top five occupations in terms of average annual job openings generated from 1982 to 1990 are janitor and cleaners, secretaries, sales clerks, store managers, and waiters/waitresses. In fact, none of the 29 occupations expected to generate at least 100 job openings per year would be considered high tech.

Large classes of workers such as food service, health care service, office clerical, and cleaning service workers, despite increasing at percentage levels just above the average rate, will generate large numbers of job openings due to their sheer size and high turnover rates. The 1990 projections data indicate that food service workers alone are estimated to have far more annual job openings than all the high tech occupations combined.

This is not to say that all of the occupations will be totally immune from high tech. No doubt the job duties of some occupations will be altered by technological changes. Certain clerical workers, for instance, may be expected to use microcomputers for word processing, inventory control, mailing lists, etc. However, for the most part, the occupations with the largest projected numerical growth should be of the same character and skill level we have today.

Remember, the 1990 occupational projections are just that--projections--estimates of anticipated occupational trends. Still, they seem to indicate that although the new generation high tech occupations have been attracting a lot of attention due to their rapid expansion, they will remain in the minority for the rest of the 1980s.

Copies of the Revised Employment Projections to 1990 may be obtained by writing the Research and Statistics Section at the address listed on the back page or calling toll-free 1-800-732-9787 in North Dakota. Individuals in the Bismarck-Mandan area or from out of state should dial (701) 224-3047.

1/ The Revised Employment Projections to 1990 is an update of the Employment Projections to 1990 published in 1983. The revised "projections," which have a 1982 base year and reflect more recent labor market conditions, are scheduled to be published in late May.

DEFINITIONS

EMPLOYED: A count of individuals 16 years of age or older who worked for pay any time during the week which includes the 12th of the month or who worked unpaid for 15 hours or more in a family-operated enterprise. Members of the Armed Forces stationed in the United States are included in the U.S. totals, but are excluded from the North Dakota and MSA counts.

UNEMPLOYED: Includes all individuals who did not work during the survey week, but were available for work, except for temporary illness, and had looked for jobs within the preceding four weeks.

LABOR FORCE: The sum of the employed and the unemployed.

UNEMPLOYMENT RATE: The number of unemployed as a percent of the total labor force.

CONSUMER PRICE INDEX: A monthly statistical measure of the average change in prices in a fixed market basket of goods and services. Though the CPI is often called the "Cost of Living Index," it measures only price change, which is just one of several important factors affecting living costs.

PRODUCER PRICE INDEX: This index measures the average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing.

NONAGRICULTURAL WAGE AND SALARY EMPLOYMENT: An estimate of all full- and part-time wage and salary employees who worked during, or received pay for, the pay period which includes the 12th of the month. Estimates measure the number of jobs by industry and reflect employment by place of work.
